

RRI /SSH in ICT –related parts of WP 16-17

RRI: a cross-cutting issue in H2020

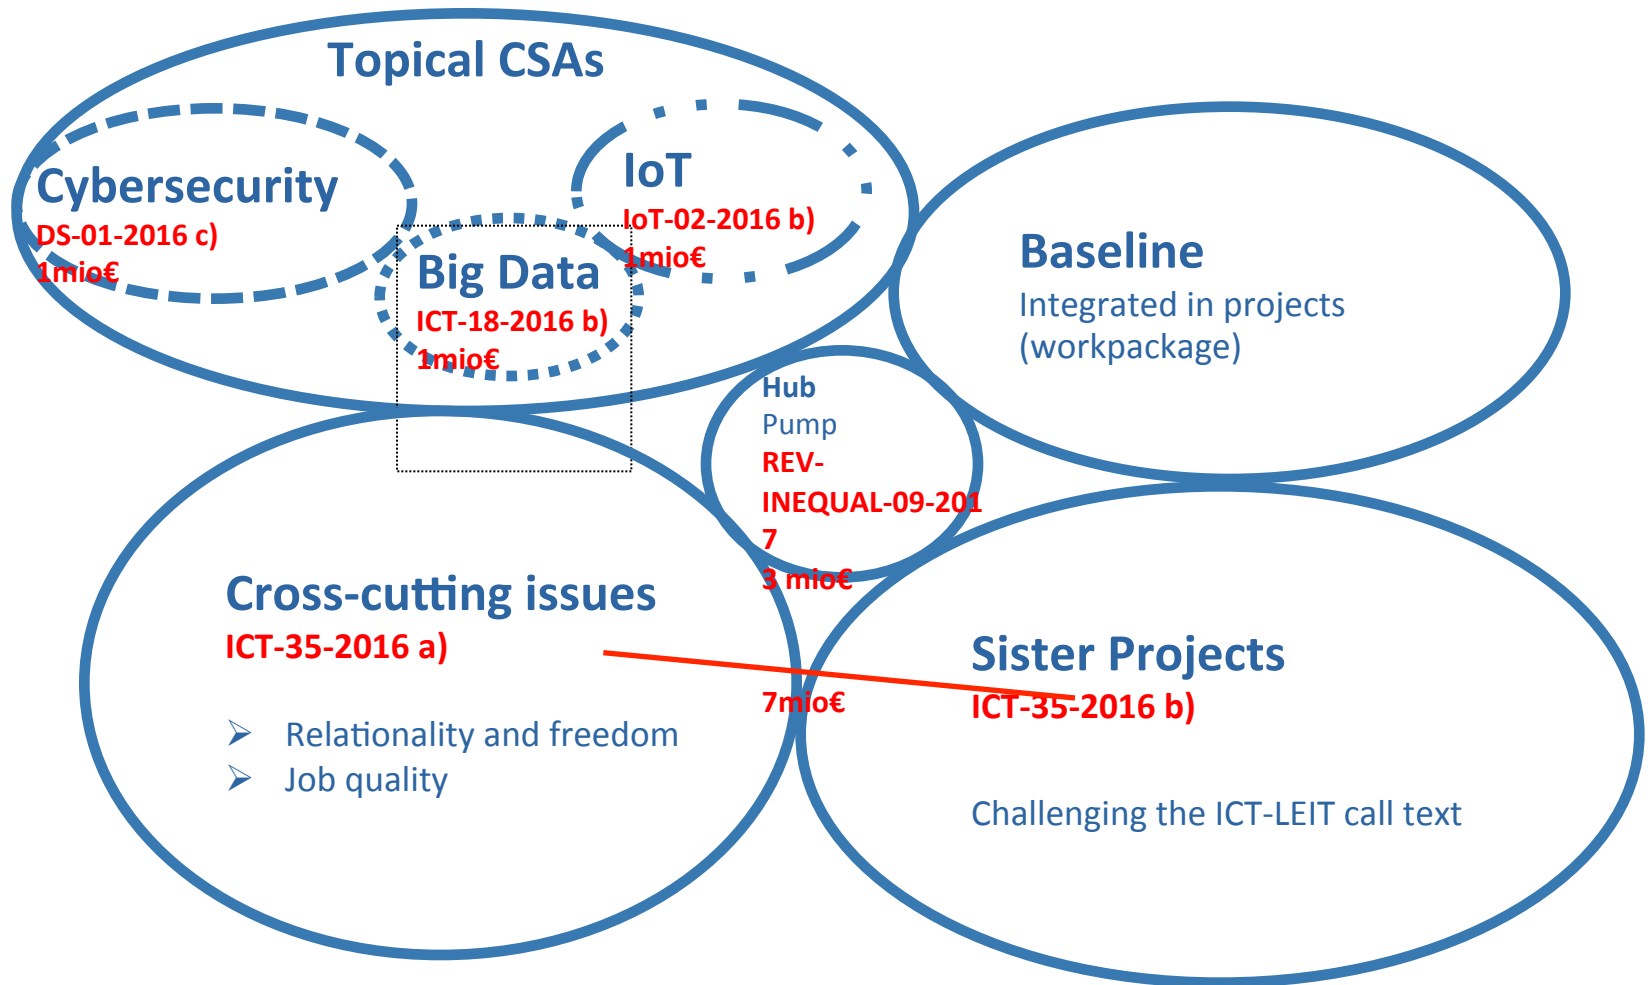

- SSH also **cross-cutting issue** !
 - SSH more than "airbags" or "watch dogs" of technological development!
 - **SSH as a source of innovation**: not only problem-solver, but with shaping and redescription power.
- ➔ **RRI: critical accompaniment** rather than risk-based.

Different tools

Different distances

Relationality and freedom

"How can we avoid the traps of ICTs ending up in isolating humans behind their screen, or harnessing them in a passive role? In the forthcoming hyperconnected era, it is essential to acknowledge the dual human aspirations for relationships and for freedom, and the dynamic nature of the relationships between humans and artefacts".

Job quality

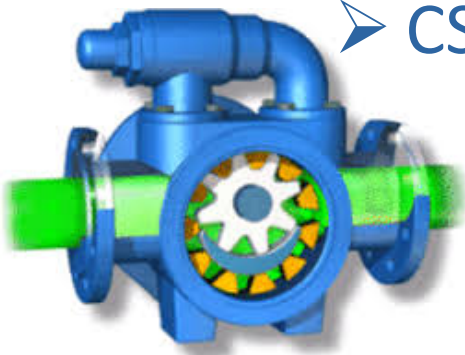

"What are the conditions for ICT-enabled innovations to generate interesting and rewarding jobs, and reduce the risk of excluding sections of society from the labour market? What economic models can ensure a fair sharing of the created added value?"

- Unveiling implicit biases in research agendas
 - Propose constructive alternative framings
 - Foster innovation through widening of imaginaries,
 - Provide challenging questions, issues and solutions
-
- RIAs of 300K-500K
 - Simple project structure
 - Pilot

- Bring life to the distributed approach to responsible and inclusive innovation in H2020-funded ICT-related innovation
- Activate constructive interactions between SSH and ICT to ensure that H2020-funded ICT-related innovation is responsible and inclusive
- CSA of 3 mio€
